

Xbridge System, CorreLog, Inc., Inc. announce the first fully integrated and automated data discovery, and Security Information & Event Management (SIEM) DLP solution for IBM® z/OS at SHARE San Antonio, February 28-March 4

Xbridge™ Systems will co-exhibit with CorreLog at SHARE San Antonio this year to unveil the first solution for a critical gap in mainframe security. CorreLog's SIEM Agent™ for z/OS and Visualizer™, combined with Xbridge's DataSniff™, discovers and identifies legacy data to provide real-time monitoring for z/OS data security and compliance.

Las Vegas, NV, February 5, 2016 –[Xbridge Systems](http://www.xbridgesystems.com), Data Discovery experts for z/OS, in conjunction with [CorreLog](http://www.correlog.com), the leader in multi-platform IT security event log management, today announced the unveiling of their comprehensive DLP and real-time event auditing solution for z/OS mainframe security and compliance at [SHARE San Antonio](http://www.share.com), February 28-March 4. CorreLog and Xbridge's technology partnership and resulting solution offers the industry's first and only DLP and real-time Security Information and Event Management (SIEM) system for IBM z/OS.

Xbridge's Data Loss Prevention technology, DataSniff, is an automated mainframe data discovery system used to locate sensitive data as a prerequisite to data classification, database auditing, compliance, data security and/or Identity and Access Management (IAM) initiatives. Both DataSniff and CorreLog's SIEM Agent for z/OS are critical components of compliance initiatives addressing PCI DSS, HIPAA, Sarbanes-Oxley, IRS Pub. 1075, GLBA and other data security standards. CorreLog's Visualizer™ is the user interface layer that funnels the components of these two systems into a standard, simplified web browser. The joint solution is seamlessly integrated across a single Xbridge and CorreLog platform. The SIEM Agent for z/OS is certified for IBM QRadar SIEM, HP ArcSight SIEM, RSA Security Analytics (EMC), and also has field integrations with all brand-name SIEM solutions.

"The integration of CorreLog's SIEM Agent and Visualizer solutions unified with DataSniff Data Discovery solution, featuring Security Analyzer, creates a new, fully integrated and automated Data Loss Prevention (DLP) and Security Information & Event Management (SIEM) software solution for IBM z/OS systems," said Ray Williams, Chairman, CEO and Co-Founder of Xbridge Systems, Inc. "We are very excited to be partnering with CorreLog to create the first Discovery and Monitoring solution for these critical systems."

CorreLog SIEM Agent for z/OS is a mainframe security and compliance software that scans RACF, AFC2, Top Secret, and DB2 logs for suspicious dataset accesses and converts them to syslog format for real-time event correlation in CorreLog's SIEM, or any other enterprise SIEM solution. For users without access to a SIEM license, CorreLog offers Visualizer™, a SIEM console with SIEM functionality that is accessed through a standard web browser. The combined solution provides the industry's only automated discovery tool for DLP coupled with SIEM event correlation capability for IBM z/OS.

"This is what the industry has been asking and waiting for, and we're excited to unveil it at SHARE San Antonio this year" said George Faucher, president and CEO of CorreLog, Inc. "Most CISOs aren't aware of user activity across legacy data and applications that reside in their mainframes, and they are now exposed in their IT security and compliance."

Xbridge Systems, Inc. and CorreLog, Inc. will be sharing booth 616-618 at SHARE San Antonio in the Henry B. Gonzalez Convention Center, February 28-March 4. In addition, Charles Mills, CorreLog's Director of Advanced Projects, will host a technical breakout session addressing advancements in z/OS mainframe security. Mills' breakout session details:

CorreLog Speaking Session: “Protect your Mainframe with SIEM (Security Information and Event Management) and Make a \$2 Million Connection”

- When: Tuesday, March 01, 2016: 11:15 AM-12:15 PM CST
- Where: Room 225A, Henry B. Gonzalez Convention Center, San Antonio, TX
- Session #: 18538 | Session details from Share.org
- Speaker: Charles Mills, CorreLog Director of Advanced Projects | [Speaker Bio](#)
- Speaking Tracks: [Enterprise Data Center](#) | [Security and Compliance](#)

You can find more information on SHARE San Antonio events via their agenda at www.share.org.

About SHARE:

SHARE is an independent volunteer-run information technology association that provides education, professional networking and industry influence. SHARE is headquartered in Chicago, Illinois, and more information on SHARE can be found at share.org.

About Xbridge:

Xbridge Systems provides data loss prevention software and services to commercial and government customers who need to identify, discover, monitor and protect critical data assets on z Systems mainframes. With Xbridge software, organizations can reduce risk, protect brand reputation and privacy, and comply with internal and external security policies. For more information, please visit [Xbridge Systems](#).

About CorreLog:

CorreLog, Inc. is the leading independent software vendor (ISV) for cross-platform IT security log management and correlation. Our solutions provide the best-in-class, real-time event log management across both distributed (Windows/UNIX/Linux) and mainframe platforms (IBM z/OS). Event Log management is ready-format for any name brand enterprise SIEM (Security Information & Event Management) correlation servers.

CorreLog's flagship product, SIEM Agent for z/OS, is the first real-time z/OS event monitoring solution available, converting mainframe security events such as RACF, ACF2, Top Secret, and DB2 accesses into syslog events compatible with enterprise SIEM systems. CorreLog's SIEM Agent has been designed to comply with standards set forth by PCI DSS, HIPAA, IRS Pub. 1075, SOX, GLBA, FISMA, NERC, and many other regulatory standards. For more information on CorreLog products, please visit [here](#). ###
